

EUROSPINE TFR Course 2016

Read a few personal statements of participants of the EUROSPINE TFR Course 2016 in Milan!

Quick Facts:

Event: EUROSPINE TFR Course 2016

Location: Milan, Italy

Date: 7-11 March 2016

Participants: 19

Countries present: 10

Laura Scaramuzzo (Italy):

It was a great opportunity to learn the principles and correct methodology, to do clinical research from a so competent but also very warm-hearted faculty. They always discuss with participants both in the lectures time and in the practice and in the last one really help you to find your correct way to make research.

It was also a great opportunity to know experienced but also young researchers in order to enlarge your net, increase, and improve your work.

Alexandre Petric (France):

The EUROSPINE TFR Course in Milan last year was amazing. The teachers were awesome, very qualified and the most important: understandable, even if English isn't your first language. We learned the basics to start doing some research. The programme was huge but at the end I was happy to learn that much. The others students were open minded, and it was nice to discuss from different points of view. To finish, I warmly recommend this course to everybody who wants to learn the basics in research!

Silvano Ferrari (Italy):

It was an opportunity for me to be able to spend a week with Margaret Nordin and her collaborators, within an informal atmosphere to learn, explore and discuss articles and talk to them about evidence and clinical reasoning.

Due to my participation, I engaged new friendships with students and faculty as well as improving my skills in the field of research. Having acquired these skills, I am currently starting my first "qualitative" research and have just sent a research project to EUROSPINE with the hope of receiving a grant.....

Mohamed Tohamy (Germany):

As scholars, we strive to do high-quality research that will advance science. We come up with what we believe are unique hypotheses, base our work on robust data and use an appropriate research methodology. As we write up our findings, we aim to provide theoretical insight, and share theoretical and practical implications about our work. Then we submit our manuscript for publication in a peer-reviewed journal. For many, this is the hardest part of research, and I think, if you want to achieve it easily, you should take part in a TFR Course.

What I learnt in this Course:

- Do not rush submitting your article for publication.
- Select an appropriate publication outlet.
- Read the aims and scope and author guidelines of your target journal carefully.
- Make a good first impression with your title and abstract.
- Have a professional editing firm copy-edit (not just proofread) your manuscript, including the main text, list of references, tables and figures.
- Submit a cover letter with the manuscript.
- Address reviewer comments very carefully.

Did these comments make you want to participate in one of the upcoming EUROSPINE TFR Course?
