Specialisation	Orthopaedics and spinal surgery
Member of EUROSPINE since	01/01/2019
Observership	Klinikum Rechts der Isar, Technical university of Munich, Munich, Germany

First of all, I thank EUROSPINE Education Committee for offering me such a unique memorable opportunity to do an Observership under famous Prof. Dr. Med. Bernhard Meyer of Technical University of Munich, Germany. I spent 13 days between 10/02/2020 and 24/02/2020 at technical University of Munich, Germany. It was a nice experience of knowledge sharing for me to visit such a famous university in Germany.

It began with a warm reception when I arrived in technical university of Munich. On the very first day I was introduced to official formalities and every subsequent events followed. I had the opportunity to take part in all the surgical and clinical activities during my stay there.

Daily work schedule included morning session, daily operations, ward round, weekly reviews and discussions on various topics like spinal trauma, spinal tumour, degenerative spinal disorders, spinal deformity, morbidity and mortality and post op follow-ups.

As a matter of fact, I was impressed by the state-of-the-art technique of spinal procedures with navigation system. All the professors and consultants carried out surgeries with extreme professionalism. Prof. Meyer made the final touch in nearly all the operations. No doubt, he is a master class spine surgeon.

I had the chance to see the transthoracic corpectomy, anterior lumbar corpectomy, minimally invasive spine surgery with navigation system. cervical pedicle screw and C1 lateral mass screw insertion under navigation system. The entire staffs at the hospital was very warm, friendly, helpful and co-operative. I felt very comfortable during my whole stay in Munich.

Germany is a beautiful country having immense of natural beauties, superb communication and transport system and friendly people. I visited several tourist spots, especially lovely Alps Mountain. I enjoyed the week ends with my German colleagues. I will never forget this valuable experience in my life. Frankly speaking, the experience I shared from Germany will influence a great impact on my future practices and career.

I would like to thank professor Bernhard Meyer for accepting me and offering me the opportunity to visit the technical university of Munich and EUROSPINE for extremely important support that has made all this possible.
